

Team Contract

Team Name: Group E

GOALS: What are our team goals for this project? What do we want to accomplish? What skills do we want to develop or refine?
Project objective: Design an LLM-powered planning agent for academic research, and justify the design in a 1,000-word proposal supported by diagrams and references. Our team's goals for this project are: ● To address each component of the assessment specification comprehensively: requirements, design rationale, challenges, tooling, and multiple system diagrams. ● To write the report against the grading criteria, ensuring each of the four weighted bands is addressed deliberately rather than incidentally. ● To submit a single team file by the end of Unit 6, through the nominated Team Lead. Additionally, we aim to refine the following skills: ● The analysis and comparative evaluation of agent architectures. ● The application of task decomposition and planning strategies within multi-agent systems. ● The construction of UML models that convey design intent accurately. ● The critical use of academic literature to substantiate technical decisions. ● Concise technical writing under a defined word limit. ● Effective collaboration within a distributed professional team, and through multi-time zones.
EXPECTATIONS: What do we expect of one another in regard to attendance at meetings, participation, frequency of communication, the quality of work, etc.?
● Meetings: To attend all agreed meetings and participate actively in discussions and decision-making. ● Deadlines: To complete assigned tasks by the internal deadlines that the team has agreed upon. ● Communication: To communicate early when assistance, support, or additional time is required. ● To engage respectfully with differing opinions. ● Participation: Fair contribution of each member. ● Quality of Work: Review and proofread each other's work, share drafts with proper citations according to the UoEO guidelines.

POLICIES & PROCEDURES: What rules can we agree on to help us meet our goals and expectations, such as preparatory tasks, generating ideas, and evaluating outcomes? ● Decision -Making: Decisions are made by majority vote, after hearing all viewpoints. ● Preparation: Members come prepared to meetings, having reviewed required materials or completed assigned tasks. ● Working Process: Brainstorm → Agree on approach → Assign tasks → Execute → Review → Integrate → Submit ● Meetings: Meet online at least once per week. ● Open communication, constructive feedback and support between members ● Maintain a shared sheet to gather and track the reference list. ● Meeting minutes: Recorded and shared in the Shared Folder, capturing decisions, actions, owners, and deadlines.
ROLES: Which roles do we need in this project, and how do we allocate them? Will there be a project lead? Is there a need to rotate roles? ● Fred - Project Coordinator: Organises meetings, captures minutes, monitors deadlines, final checks against the criteria grid before submission and submits final work. ● Alya - Research Lead: Finds academic sources, checks citations and references and ensures citations are embedded in design/methodology paragraphs, not separate. ● Amna - Technical Design Lead: Develops the agent architecture and system and identifies the development challenges and mitigations against them. ● Aldana - Methodology Lead: Defines the development methodology/agent-oriented approach, and justifies the technical choices. ● Panagiotis - Diagrams and quality check: Creates system diagrams and checks structure, grammar and formatting. Roles denote ownership and accountability, not exclusivity: every member contributes written content and reviews the work of others. Roles remain fixed for the duration of this assignment to avoid handover cost, though minute-taking is handled by the project coordinator, and responsibilities may be reallocated by agreement should workload prove uneven.
CONSEQUENCES: How will we address non-performance regarding these goals, expectations, policies and procedures? How do we resolve disagreements?
If a team member repeatedly does not meet expectations: 1. First occurrence → friendly conversation to clarify issues. 2. Second occurrence → raise formally in the group meeting. 3. Third occurrence → documentation of issue + notify module tutor if necessary. Disagreements will be resolved through respectful discussion, seeking compromise and evidence-based decisions.

By signing this contract, we confirm that:

- We have participated in formulating these goals, expectations, roles, procedures, and consequences as stated in this contract.
- We agree to abide by the contents of this contract
